

Human Sequence Database Content

Note – sequences were extracted from the four sources and no non-redundantizing within or between the sources was performed.

Protein Databank (PDB)

2470 antibody chains in the PDB were annotated as 'HOMO SAPIENS'.

The following entries could be excluded since the chains are annotated as coming from more than one species (i.e. they are chimeric or CDR-grafted antibodies):

Species annotation	Count
HOMO SAPIENS, MUS MUSCULUS	51
HOMO SAPIENS, RATTUS NORVEGICUS	2
HOMO SAPIENS, SYNTHETIC CONSTRUCT	30
MUS MUSCULUS, HOMO SAPIENS	168
MUS MUSCULUS,HOMO SAPIENS	8
ORYCTOLAGUS CUNICULUS, HOMO SAPIENS	14

EMBLIG (EMBL-ENA)

61435 sequences were annotated as 'Homo sapiens (human)' of which 1037 came from patents.

Kabat

6185 sequences were annotated as 'human'
